

NAME

smSyncd.conf — smSyncd configuration file format

DESCRIPTION

The format of the configuration file for *smSyncd* is very simple and follows some general unix conventions.

A line in **smSyncd.conf** may consist of either a *comment* or a *key=value* pair. A line starting with a *#* is considered a comment and is ignored. Empty lines and lines consisting entirely of whitespace are ignored as well. Leading and trailing whitespace in *key=value* specifications is ignored. Unknown *key* fields may be ignored if a warning is generated by the server, else they should cause an error.

SUPPORTED KEYS

PSK	This specifies the pre-shared key used to authorize clients and set up encryption.
PORT	This specifies the port to listen on. If this key is not found in the configuration file, <i>smSyncd</i> will bind to port 4242.
MTREE_KEYWORDS	The list of supported keywords. See <i>mtree(1)</i> for possible values.
